The possibility exists that a labor union within the military services of the United States could become a reality with the advent of an all-volunteer armed force. The actual probability of such an event being indeterminate at this time, the situation should be closely studied to determine the advantages and disadvantages of military unionization are presented along with the possible limitations on a military union should it become a reality. Two military unions operating with some degree of success in West Germany and Norway, respectively, are analyzed. Limitations common to both the Norwegian and West German unions are discussed to determine their possible applicability to the armed forces of the United States.

This study conducted research into the field of heating, ventilating, and air conditioning (HVAC) controls. Specifically, the research attempted to determine if the Air Force Standard Control Panel would aid in solving the Air Force's problems with complicated and unreliable HVAC controls. The research conducted an experiment and a Delphi survey of experts. The experiment compared the Standard Panel with a pneumatic built-up system. The analysis included a comparative investigation of the installation, calibration, and operations of each system and a statistical analysis and comparison of the drift of each system's mixed air and supply air controllers. The Delphi survey included eight experts in the controls field who were familiar with the Air Force Standard Panel. The survey included seven questions and was conducted in three rounds. No conclusion could be drawn from the statistical results of the experiment. However, the researcher concluded from the results of the qualitative portion of the experiment and the consensus of the Delphi experts that the Standard Panel was not superior to other controls systems in terms of design and installability (to include calibration) but was superior in terms of ability to maintain setpoint (to include overall operability) and diagnostics capability. Theses. (SDW).

"... remarkable account of the impact of postmodern philosophy on the question of ethics and politics... commendable also for its balanced view of Heidegger's relationship to politics and ethics.... an excellent account of Heidegger's philosophical understanding of technology..." -- Choice This book takes as its point of departure the question of ethics: that values and their pursuit in the West often perpetuate their own worst enemies. At issue are the dangers in the structures and movements of images, values, and ways of knowing that are most intimately a part of our lives.
