Pathophysiology for the Health Professions is a fundamental pathophysiology text designed specifically for students in any health professions field. It emphasizes the basic principles of disease processes in a clinical context, supported by concrete examples. The first two sections cover basic concepts of pathophysiologic processes such as inflammation and infections, as well as conditions that may alter a patient's health status by mimicking pathophysiological processes or affecting the process of disease. The last section on disorders of the body systems highlights commonly occurring problems and selected topics relevant to each system. Chapters in this section follow a consistent format, including a review of anatomy and physiology, concepts of disease, and specific disorders. Key terms at the beginning of each chapter - help to identify new vocabulary Think About questions at the end of the Sections help to focus students on the key points of what they've just learnt Short-answer study questions at the end of each Chapter give students the chance to measure their own understanding of the material Case Studies at the end of the Body Systems Section - helps to build critical thinking skills and encourage practical application of knowledge Tables that condense important information - makes reference easier Appendices present commonly used reference topics. Full-colour illustrations - coding through the text for easier understanding of the course of the disease Challenge boxes - for follow-up discussions on normal function Emergency Care sections throughout the book that help to describe emergency systems necessary to specific situations Warning Signs - these describe signs and symptoms of diseases and disorders that students should be alert to A glossary that defines all key terms from each chapter - underlining the new terminology for easy revision.

Green Gentrification looks at the social consequences of urban "greening" from an environmental justice and sustainable development perspective. Through a comparative examination of five cases of urban greening in Brooklyn, New York, it demonstrates that such initiatives, while positive for the environment, tend to increase inequality and thus undermine the social pillar of sustainable development. Although greening is ostensibly intended to improve environmental conditions in neighborhoods, it generates green gentrification that pushes out the working-class, and people of color, and attracts white, wealthier in-migrants. Simply put, urban greening "richens and whiten's," remaking the city for the sustainability class. Without equity-oriented public policy intervention, urban greening is negatively redistributive in global cities. This book argues that environmental injustice outcomes are not inevitable. Early public policy interventions aimed at neighborhood stabilization can create more just sustainability outcomes. It highlights the negative social consequences of green growth coalition efforts to green the global city, and suggests policy choices to address them. The book applies the lessons learned from green gentrification in Brooklyn to urban greening initiatives globally. It offers comparison with other greening global cities. This is a timely and original book for all those studying environmental justice, urban planning, environmental sociology, and sustainable development as well as urban environmental activists, city planners and policy makers interested in issues of urban greening and gentrification.
