### Computer Simulation And Modelling Dabiri

In Modelling & Simulation, Modelling is the process of representing a model which includes its construction and working. This model is similar to a real system, which helps the analyst predict the effect of changes to the system. Simulation of a system is the operation of a model in terms of time or space, which helps analyze the performance of an existing or a proposed system.

Computer modeling and simulation is used to predict weather conditions. In further explaining her process, Bridger employs the imagery of a cube centered over Chicago that's roughly a kilometer east-west by a kilometer north-south. The goal is to predict the temperature in the cube's center and extrapolate that reading to the entire thing.
