This completely revised and updated edition provides a comprehensive overview of mammalian biochemistry. Topics examined include introductions to the structure of the cell and protein composition, followed by in depth coverage of biological membranes, bioenergetics, metabolism of carbohydrates, lipids, amino acids and nucleotides. Chapters have been updated on DNA replication and repair, recombinant DNA and biotechnology, regulation of gene expression and RNA structure and function. Further subjects covered include protein synthesis and post-translational modification, biochemistry of hormones, and biotransformation.

CD-ROM includes animations, living graphs, biochemistry in

Thomas M. Devlin's Textbook of Biochemistry with Clinical Correlations presents the biochemistry of mammalian cells, relates events at a cellular level to the subsequent physiological processes in the whole animal, and cites examples of human diseases derived from aberrant biochemical processes. The organization and content are tied together to provide students with the complete picture of biochemistry and how it relates to humans. Loaded with new material and chapters and brimming with detailed, full-color illustrations that clearly explain associated concepts, this sixth edition is an indispensable tool for students and professionals in the medical or health sciences. Key Features of the Sixth

Notes On Clinical Biochemistry shows how the details of molecular architecture and metabolic pathways which every biochemistry student has to learn can be summarised and made applicable to a wide range of clinical problems. This is done partly by a theoretical discussion of the links between the basic biochemistry and corresponding medical scenarios, and partly by the discussion of case histories. In this way, a very wide range of medical problems is discussed economically. This book is aimed at all those studying clinical chemistry, and medical students in the middle period of their course, that is the 2nd — 4th years. This is when the knowledge of basic sciences gained in the earlier period

Download File PDF Devlin Biochemistry

comes to be applied to clinical situations, and the book attempts to show, with respect to biochemistry, how this continuum is achieved. Request Inspection Copy

Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no

Download File PDF Devlin Biochemistry

longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.
