Despite the prevalence of battered women in the medical setting, many physicians fail to correctly identify and refer abused patients. The introductory chapter of this book discusses definitions of domestic violence, issues of power and control, the prevalence of the problem, the effect of domestic violence on the medical system, and reasons why physicians fail to identify abuse. The profile of domestic violence victims is discussed in terms of gender, ethnic and socioeconomic status, age, marital status, personality traits, sexual orientation, pregnancy, disabilities, immigration status, use of alcohol and drugs, family history, relationship variables, and abuse of children. Issues pertaining to abusers discussed here include substance abuse, critical risk factors, dominance of men over women, and secrecy and denial. Recognition of domestic violence can be improved through patient history and demeanor, companion's behavior, direct questioning, routine screening, and physical examination. When abuse is detected, the physician has many avenues for action: referrals to services and shelters, documentation, treatment, counseling, legal services, and follow-up care. Specific legal issues may include mandatory reporting, duty to warn, liability for reporting, and legal options for the patient. The book discusses how the medical community can prepare itself for an optimal response to domestic violence.

Intimate Partner Sexual Violence (IPSV) is the most common type of sexual violence and a common component of domestic violence, yet most cases go unreported and service responses are often inadequate. This book brings together advice for all those professionals working with individuals who have experienced IPSV and puts forward recommendations to tackle this prevalent form of sexual violence. With contributions from leading experts on IPSV, Intimate Partner Sexual Violence is a comprehensive guide to the subject which bridges the gap between research and practice. Multidisciplinary and international in approach, the book covers key issues salient to all professionals - the impact of IPSV, reproductive coercion, the physical and psychological indicators, possible consequences of taking a case to court, and best practice service responses. One section also addresses the risks and needs of IPSV victims in different contexts, such as those in same-sex or teenage relationships, immigrant victims, and those living in rural areas or in prison. This is an authoritative resource for all professionals who work with IPSV victims including counselors, social workers, refuge workers, victim advocates, mental health professionals, pastoral workers, lawyers, police, and health practitioners.

service and health care agencies. After providing a brief theoretical overview of the causes of domestic violence and its prevalence in our society, the authors cover such key topics as barriers to intervention, variations in arrest practices, the role of state and federal legislation, and case prosecution. Focusing on both victims and offenders, the book includes unique chapters on models for judicial intervention, domestic violence and health, and children and domestic violence. In addition, this edition provides an in-depth discussion of the concept of coercive control in domestic violence and its importance in understanding victim needs. Finally, this volume includes international perspectives in order to broaden the reader's understanding of alternative responses to the problem of domestic violence.
