OECD's 2013 Economic Survey of Greece examines recent economic developments, prospects and policies. Special chapters cover restoring growth and fairly sharing the social impact of the crisis.

Since World War II, a growing number of jurisdictions in both the developing and industrialized worlds have adopted progressive constitutions that guarantee social and economic rights (SER) in addition to political and civil rights. Parallel developments have occurred at transnational level with the adoption of treaties that commit signatory states to respect and fulfil SER for their peoples. This book is a product of the International Social and Economic Rights Project (iSERP), a global consortium of judges, lawyers, human rights advocates, and legal academics who critically examine the effectiveness of SER law in promoting real change in people's lives. The book addresses a range of practical, political, and legal questions under these headings, with acute sensitivity to the racial, cultural, and gender implications of SER and the path-breaking SER jurisprudence now emerging in the "Global South". The book brings together internationally renowned experts in the field of social and economic rights to discuss a range of rights controversies from both theoretical and practical perspectives. Contributors of the book consider specific issues in the litigation and adjudication of SER cases from the differing standpoints of activists, lawyers, and adjudicators in order to identify and address the specific challenges facing the SER community. This book will be of great use and interest to students and scholars of comparative constitutional law, human rights, public international law, development studies, and democratic political theory.

New Economic Constitutionalism in Europe focuses on the institutional mutation of constitutionalism following the major economic crisis in the Eurozone and globally. The main axis is that a new economic constitutionalism has arisen which trespasses on the conventional conceptual foundations and needs to be addressed with novel institutional vehicles. The author proposes an original and searching analysis of the significant constitutional evolutions that have taken place in member states in response to the global financial crisis. The book combines a sophisticated theoretical model of a new form of economic constitutionalism with detailed

Macroeconomics in Context: A European Perspective lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. With a clear presentation of economic theory throughout, this latest addition to the bestselling "In Context" set of textbooks is written with a specific focus on European data, institutions, and historical events, offering engaging treatment of high-interest topics, including sustainability, Brexit, the euro crisis, and rising inequality. Policy issues are presented in context (historical, institutional, social, political, and ethical), and always with reference to human well-being. This book is divided into four parts, covering the following key issues: The context of economic analysis, including basic macroeconomic statistics and tools; The basics of macroeconomic measurements, including GDP, inflation, and unemployment, as well as alternative measures of well-being, and the particular structures of the European economies; Methods for analyzing monetary and fiscal policy, including an in-depth coverage of the instruments and approaches of the European central bank and some coverage of an open economy; The application of the tools learnt to selected macroeconomic issues, such as the euro crisis, the global financial crisis, public debt, global development, and environmental sustainability. Far more than any other existing macroeconomic textbook, this book combines real-world relevance of the topics covered with a strong focus on European institutions and structures within an approach that explains multiple economic paradigms. This combination helps to raise students' interest in macroeconomics as well as enhance their understanding of the power and limitation of macroeconomic analysis. This book theorizes shadow education as a new component of curriculum, expanding the concept of curriculum to include this type of learning. Curriculum scholars and theorists have largely disregarded shadow education as a valid topic of scholarly attention despite its massive growth worldwide. But shadow education has become a global phenomenon with ever-increasing numbers of student participants; it complements school-based curricula, in many cases going beyond. Thus, Jung and Kim argue that shadow education requires rigorous analysis by curriculum studies scholars. This volume analyzes the state and importance of shadow education in countries around the world: its representative forms and industries (private tutoring institutes, home-visit private tutoring, Internet-based private tutoring, subscribed learning programs, after-school programs), its characteristic forms in terms of curriculum, and its roles in student learning. It also explores various features of shadow education based on an eight-year ethnographic study in South Korea.

Volume 1 (A and B) of the Yearbook of International Organizations covers international organizations throughout the world, comprising their aims, activities and events

Africa, which was not long ago discarded as a hopeless and irrelevant region, has become a new 'frontier' for global trade, investment and the conduct of international relations. This book surveys the socio-economic, intellectual and security related dimensions of African regionalisms since the turn of the 20th century. It argues that the continent deserves to be considered as a crucible for conceptualizing and contextualizing the ongoing influence of colonial policies, the emergence of specific integration and security cultures, the spread of cross-border regionalisation processes at the expense of region-building, the interplay between

territory, space and trans-state networks, and the intrinsic ambivalence of global frontier narratives. This is emphasized through the identification of distinctive 'threads' of regionalism which, by focusing on genealogies, trajectories and ideals, transcend the binary divide between old and new regionalisms. In doing so, the book opens new perspectives not only on Africa in international relations, but also Africa's own international relations. This text will be of key interest to students and scholars of African politics, African history, regionalism, comparative regionalism, and more broadly to international political economy, international relations and global and regional governance.

Biases, blind spots and bonuses (or incentives more broadly) have led to numerous risk management disasters. Risk governance is a potential solution to these problems yet is not always as effective as we would like it to be. One reason for that is the current dearth of risk governance expertise. This book seeks to address this issue, providing: Understanding of the fundamental forces that cause disasters: the biases, blind spots and bonuses. This understanding is drawn from the disciplines of economics/finance and psychology; Explanation of the structures of risk governance and common challenges experienced in their use e.g. board risk committee, risk/compliance function, assurance function, risk appetite statement, risk disclosures; Thorough investigation of risk culture and its importance in risk governance, including the assessment of risk culture; Understanding of the mechanisms of executive compensation and how they link to risk management – one of the most difficult challenges confronting both risk and remuneration committees; Explanation of the risk management process (based on international standards ISO31000), including practical guidance on risk communication, analysis and treatment; Guidance on the management of strategic risk, emphasising the importance of scenario analysis; Application of these principles to cyber risk, climate risk – two pervasive risks affecting almost every

organisation; Numerous case studies and examples drawn from various industries around the world; and Discussion of what has been learned about risk governance from the COVID-19 experience.
