Electronic warfare is any action involving the use of the electromagnetic spectrum or directed energy to control the spectrum, attack an enemy, or impede enemy assaults. The purpose of electronic warfare is to deny the opponent the advantage of, and ensure friendly unimpeded access to, the EM spectrum. EW can be applied from air, sea, land, and/or space by manned and unmanned

systems, and can target humans, communication, radar, or other assets.

~~Electronic warfare~~ — Wikipedia
Joint publication (JP) 3-13.1
Electronic Warfare defines EMS superiority as the degree of dominance in the electromagnetic spectrum that permits the conduct of operations at a given time and place without prohibitive interference while affecting an adversary's ability to do the same. To gain spectrum superiority in a highly contested environment, forces need to maneuver within the EMS domain —employing electronic attack (EA), electronic protection (EP), and electronic warfare support (ES ...

~~How Turkey Won the Electronic Warfare Battle Against Syria ...~~
Electronic Warfare (EW) represents the ability to use the electromagnetic spectrum—signals such as radio, infrared or radar—to sense, protect, and communicate. At the same time, it can be used to deny adversaries the ability to either disrupt or use these signals. EW is divided into three (3) major areas:
