"A first-rate thriller . . . Past and present merge in The Current, Tim Johnston's atmospheric, exquisitely suspenseful novel of two murders separated by ten years." —The Washington Post "Gripping . . . Johnston's masterful novel is worth lingering over—it soars above the constraints of a traditional thriller and pulls you deep into the secrets of a grief-stricken town." —People Tim Johnston, whose breakout debut Descent was called "astonishing," "dazzling," and "unforgettable" by critics, returns with The Current, a tour de force about the indelible impact of a crime on the lives of innocent people. In the dead of winter, outside a small Minnesota town, state troopers pull two young women and their car from the icy Black Root River. One is found downriver, drowned, while the other is found at the scene—half frozen but alive. What happened was no accident, and news of the crime awakens the community's memories of another young woman who lost her life in the same river ten years earlier, and whose killer may still live among them. Determined to find answers, the surviving young woman soon realizes that she's connected to the earlier unsolved case by more than just a river, and the deeper she plunges into her own investigation, the closer she comes to dangerous truths, and to the violence that simmers just below the surface of her hometown. Grief, suspicion, the innocent and the guilty—all stir to life in this cold northern town where a young woman can come home, but still not be safe. Brilliantly plotted and unrelentingly propulsive, The Current is a beautifully realized story about the fragility of life, the power of the past, and the need, always, to fight back.

This study is a theoretical investigation of the electronic and optical properties of intrinsic semiconductors using the orthogonal empirical tight binding model. An analysis of the bulk properties of semiconductors with the zinblende, diamond and rocksalt structures has been carried out. We have extended the work of others to higher order in the interaction integrals and derived new parameter sets for certain semiconductors which better fit the experimental data over the Brillouin zone. The Hamiltonian of the heterostructures is built up layer by layer from the parameters of the bulk constituents. The second part of this work examines a number of applications of the theory. We present a new microscopic derivation of the intervalley deformation potentials within the tight binding representation and computes a number of conduction-band deformation potentials of bulk semiconductors. We have also studied the electronic states in heterostructures and have shown theoretically the possibility of having barrier localization of above-barrier states in a multivalley heterostructure using a multiband calculation. Another result is the proposal for a new "type-II" lasing mechanism in short-period GaAs/AlAs superlattices. As for our work on the optical properties, a new formalism, based on the generalized Feynman-Hellmann theorem, for computing interband optical matrix elements has been obtained and has been used to compute the linear and second-order nonlinear optical properties of a number of bulk semiconductors and semiconductor heterostructures. In agreement with the one-band electvie mass calculations of other groups, our more elaborate calculations show that the intersubband oscillator strengths of quantum wells can be greatly enhanced over the bulk interband values.

Dig deeper into Grails architecture and discover how this application framework works its magic. Written by a core developer on the Grails team, this practical guide takes you behind the curtain to reveal the inner workings of its 2.0 feature set. You'll learn best practices for building and deploying Grails applications, including performance, security, scaling, tuning, debugging, and monitoring. Nina Raine's Tiger Country is a hospital play that follows a tangle of doctors and nurses in a busy London hospital - from the award-winning author of Tribes. Professionalism and prejudice, turbulent staff romances, ambition and failure collide in this swirling, action-packed drama about an overburdened health service that we all depend on and the dedicated individuals that keep it going. 'Tiger country' is where animal instinct stirs and an irrefutable eye opens. Where we make eye contact with the unknown. Tiger Country was premiered at Hampstead Theatre in 2011 and, following its sell-out run, was revived there in 2014.
