by the British author Rudyard Kipling. Considered a classic of children's literature, the book is among Kipling's best known works. Kipling began working on the book by telling the first three chapters as

Evolutionary biologists have noted that what Kipling did in fiction, they have done in reality, providing explanations for the evolutionary development of animal features. The Just So Stories each tell how a

particular animal was modified from an original form to its current form by the acts of man, or some magic.

Do genes explain life? Can advances in evolutionary and

Download File PDF How The Leopard Got His Claws

molecular biology account for what we look like, how we behave, and why we die? In this powerful intervention into current biological thinking, Brian Goodwin argues that such genetic reductionism has

important limits. Drawing on the sciences of complexity, the author shows how an understanding of the self-organizing patterns of networks is necessary for making sense of nature. Genes are important, but

only as part of a process constrained by environment, physical laws, and the universal tendencies of complex adaptive systems. In a new preface for this edition, Goodwin reflects on the advances in both
