American Psychiatric Association The original DSM TM.

This book provides a framework for scholars and clinicians to develop a comprehensive and dynamic understanding of antisocial, narcissistic, and borderline personality disorders, by seeing personality as a dual, as opposed to a singular, construct. Converging the two separate research and clinical diagnostic systems into a wholistic model designed to reach reliable and valid diagnostic conclusions, the text examines adaptive and maladaptive personality development and expression, while addressing the interpersonal system that keeps the pathology from extinguishing. Each chapter will discuss core and surface content, origin and symptom manifestation, system and pathology perpetuation, and online behavior expression, concluding with practical guidance on treatment success and effective approaches. Seasoned and tyro researchers and clinicians will be challenged to explore the utility of the DSM-5 alternative model of personality disorders and apply it to further the understanding of these complex, and often destructive, disorders.
