This book is a compilation of research summaries from a number of different focuses in the field of psychology research.

This new edition of the bestselling Measurement, Instrumentation, and Sensors Handbook brings together all aspects of the design and implementation of measurement, instrumentation, and sensors. Reflecting the current state of the art, it describes the use of instruments and techniques for performing practical measurements in engineering, physics, chemistry, and the life sciences; explains sensors and the associated hardware and software; and discusses processing systems, automatic data acquisition, reduction and analysis, operation characteristics, accuracy, errors, calibrations, and the incorporation of standards for control purposes. Organized according to measurement problem, the Second Edition: Consists of 2 volumes Features contributions from 240+ field experts Contains 53 new chapters, plus updates to all 194 existing chapters Addresses different ways of making measurements for given variables Emphasizes modern intelligent instruments and techniques, human factors, modern display methods, instrument networks, and virtual instruments Explains modern wireless techniques, sensors, measurements, and applications A concise and useful reference for engineers, scientists, academic faculty, students, designers, managers, and industry professionals involved in instrumentation and measurement research and development, Measurement, Instrumentation, and Sensors Handbook, Second Edition provides readers with a greater understanding of advanced applications.

The incredible true story of Tiger Woods ' s dramatic comeback following his humbling and very public personal, physical, and professional setbacks. One publicly imploded marriage. Two car accidents. Eight surgeries. And now, a miracle of hard work and storied talent: five Masters wins. Once hailed as " the greatest closer in history " before he fell further than any beloved athlete in America ' s memory, Tiger swung at the world ' s wildest expectations and beat the skeptics with his April 2019 Masters championship. Roaring Back traces his road to Augusta and the improbable, phenomenal comeback of one of the greatest golfers in history. New York Times – bestselling author Curt Sampson details the highs and lows of Woods ' s career in three gripping acts. From his startling loss at the 2009 PGA Championship, detrimental obsession with his swing, and that infamous night involving an ex-wife and a nine-iron...to adoring fans and lucrative sponsors turning their backs, exclusive interviews with past instructors and PGA tour peers, and an arrest complete with a toxicology report . . . finally to Tiger coming from behind for his fifth green jacket as the crowd rumbled in Georgia, and how his comeback rivals those of the most dramatic in his sport. Sampson also places Woods ' s defeats and triumphs in the context of historic comebacks by other notable golfers like Ben Hogan, Skip Alexander, Aaron Siltan, and Charlie Beljan, finding the forty-three-year-old alone on the green for his trajectory of victory against all odds. As this enthralling book reveals, Tiger never doubted the perseverance of the winner in the mirror.

" Sampson admirably details all the highs and lows. " —Jim Nantz, CBS Sports

Make little bowls with big style!An entire pottery workshop is inside this kit--wheel included! Learn hand-building techniques with clay using a turntable and miniature bowl molds. Let your creations air-dry, then paint them with vivid colors. Finally, glaze your pots, plates, bowls, and vases with clear glaze to get that artisanal finish.

This book presents breakthroughs in the design of Wireless Energy Harvesting (WEH) networks. It bridges the gap between WEH through radio waves communications and power transfer, which have largely been designed separately. The authors present an overview of the RF-EHns including system architecture and RF energy harvesting techniques and existing applications. They also cover the idea of WEH in novel discoveries of information, the theoretical bounds in WEH, wireless sensor networks, usage of modern channel coding together with WEH, energy efficient resource allocation mechanisms, distributed self-organized energy efficient designs, delay-energy trade-off, specific protocols for energy efficient communication designs, D2D communication and energy efficiency, cooperative wireless networks, and cognitive networks.

The book comprises selected papers presented at the International Conference on Advanced Computing, Networking and Informatics (ICANI 2018), organized by Medi-Caps University, India. It includes novel and original research work on advanced computing, networking and informatics, and discusses a wide variety of industrial, engineering and scientific applications of the emerging techniques in the field of computing and networking.

" You can almost taste the food in Bill Buford ' s Dirt, an engrossing, beautifully written memoir about his life as a cook in France. " —The Wall Street Journal What does it take to master French cooking? This is the question that drives Bill Buford to abandon his perfectly happy life in New York City and pack up and (with a wife and three-year-old twin sons in tow) move to Lyon, the so-called gastronomic capital of France. But what was meant to be six months in a new and very foreign city turns into a wild five-year digression from normal life, as Buford apprentices at Lyon ' s best boulangerie, studies at a legendary culinary school, and cooks at a storied Michelin-starred restaurant, where he discovers the exacting (and incomprehensibly punishing) rigueur of the professional kitchen. With his signature humor, sense of adventure, and masterful ability to bring an exotic and unknown world to life, Buford has written the definitive insider story of a city and its great culinary culture.

History of the various buildings known as the Cliff House, in photographs.

This book presents new software engineering approaches and methods, discussing real-world problems and exploratory research that describes novel approaches, modern design techniques, hybrid algorithms and empirical methods. This book constitutes part of the refereed proceedings of the Software Engineering and Algorithms in Intelligent Systems Section of the 7th Computer Science On-line Conference 2018 (CSOC 2018), held in April 2018.
