Biology And Habitat Part I Aquatic Insect Ecology

Aquatic insects have some fascinating adaptations for breathing under water: Snorkel with a breathing tube. Mosquito larva and water scorpions use breathing tubes. The end of the tube usually has bristles to break the water surface tension and keep the tube open. This method, however, doesn't allow the insect to travel far from the water surface.

Aquatic Insect Ecology—Maryland

Much as terrestrial insects are primary consumers of plant matter, so do aquatic insects account for a large amount of the breakdown of plant material in subsurface ecosystems (Resh and Rosenberg 164). This fact, while illustrating the relative importance of insects in an aquatic ecosystem, also provides clues as to where they can be found.
