Both pragmatic and eloquent, Mendelson provides beginning and veteran homemakers with a seamless combination of reliable instruction, time-tested advice, and fascinating personal narrative. As a farm girl in Pennsylvania, Mendelson—who is a philosopher, lawyer, and professor, as well as a homemaker, wife, and mother—received a classic domestic education from her grandmothers, aunts, and mother. *Laundry* combines the best of the traditional lore they taught her with the latest in technical and scientific information. When 27-year-old Valentin Romanovsky discovers that he will be infertile by the time he hits his 30s, he goes into an all-out

panic. Young, rich, and notoriously single, Val was sure he had all the time in the world to drink, party, and enjoy the beautiful women who were constantly at his disposal. Best known as the Romanovsky brother who thrived on living in the fast lane, he always partied hard with the distant dream of having a wife and a family one day. If that dream had any chance of coming true he knew he had no choice but to settle down... and fast. But with who? Late night trysts and one night stands were his calling card. There wasn't a single woman in his life who he could picture being the mother of his child. Except the one woman he knew he could never have. Zoey Black would always have deep love in her heart for the Romanovsky family. They'd taken her in at fourteen when she'd been at the lowest point in her life, with no place else to go, and treated her as their own. Ten years later, the Romanovskys were still apart of her life--as far as Zoey was concerned, they were her family. The parents called her "daughter" and the four brothers called her "sister." Well, not all four. Val Romanovsky never called her "sister," and as secrets, lies, and betrayals are revealed, Zoey would finally understand why. Interracial erotic romance. Strong sexual content, strong language. TAMING VAL is the first novella in The Romanovsky Brothers four-part series, and is best read in order of publication. From award-winning musician and composer Warren Ellis comes the unexpected and inspiring story of a piece of chewing gum. Featuring an introduction from Nick Cave. 'Warren has turned this memento, snatched from his idol's piano in a moment of rapture, into a genuine religious artefact.' NICK CAVE 'In praise of meaning-rich relics and magical things. Totally heartwarming project.' MAX PORTER 'A unique study of a fan's devotion, of transcendence and of the artistic vocation - it's got depth and great warmth. It's a beautiful piece of work.' KEVIN BARRY On Thursday 1 July, 1999, Dr Nina Simone gave a rare performance as part of Nick Cave's Meltdown Festival. After the show, in a state of awe, Warren Ellis crept onto the stage, took Dr Simone's piece of chewed gum from the piano, wrapped it in her stage towel and put it in a Tower Records bag. The gum remained with him for twenty years; a sacred totem, his creative muse, growing in significance with every passing year. In 2019, Cave - his collaborator and great friend - asked Warren if there was anything he could contribute to display in his Stranger Than Kindness exhibition. Warren realised the time had come to release the gum. Together they agreed it should be housed in a glass case like a holy relic. Worrying the gum would be damaged or lost, Warren decided to first have it cast in silver and gold, sparking a chain of events that no one could have predicted, one that

would take him back to his childhood and his relationship to found objects. Nina Simone's *Gum* is about how something so small can form beautiful connections between people. It is a story about the meaning we place on things, on experiences, and how they become imbued with spirituality. It is a celebration of artistic process, friendship, understanding and love.

"Mama Natural's Week to Week Guide to Pregnancy is the modern (and yet ancient) approach to pregnancy and childbirth.

"Natural" recognizes that pregnancy and birth are normal, and that having a baby is a wondrous biological process and rite of passage--not a medical condition. This book draws upon the latest research showing how beneficial and life-changing natural birth is for both babies and moms. Full of weekly advice and tips for a healthy pregnancy, Grace details vital nutrition to take, natural remedies for common and troublesome symptoms, as well as the appropriate (and inappropriate) use of interventions. Pregnancy, childbirth, health, health and wellness, parenting, family"--

Introducing a NEW addition to our growing library of computer science titles, *Algorithm Design and Applications*, by Michael T. Goodrich & Roberto Tamassia! *Algorithms* is a course required for all computer science majors, with a strong focus on theoretical

topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.

The primary objectives of this revision of the laboratory manual include insuring that the procedures are clear, that the results clearly support the theory, and that the laboratory experience results in a level of confidence in the use of the testing equipment commonly found in the industrial environment. For those curriculums devoted to a dc analysis one semester and an ac analysis the following semester there are more experiments for each subject than can be covered in a single semester. The result is the opportunity to pick and choose those experiments that are more closely related to the curriculum of the college or university. All of the experiments have been run and tested during the 13 editions of the text with changes made as needed. The result is a

set of laboratory experiments that should have each step clearly defined and results that closely match the theoretical solutions. Two experiments were added to the ac section to provide the opportunity to make measurements that were not included in the original set. Developed by Professor David Krispinsky of Rochester Institute of Technology they match the same format of the current laboratory experiments and cover the material clearly and concisely. All the experiments are designed to be completed in a two or three hour laboratory session. In most cases, the write-up is work to be completed between laboratory sessions. Most institutions begin the laboratory session with a brief introduction to the theory to be substantiated and the use of any new equipment to be used in the session.
