From the author of The Great Fire, a collection of stories about love and acceptance, expectations and disappointment Shirley Hazzard's stories are sharp, sensitive portrayals of moments of crisis. Whether they are set in the Italian countryside or suburban Connecticut, the stories deal with real people and real problems. In the title piece, a young widow is surprised and ashamed by her lack of grief for her husband. In "A Place in the Country," a young woman has a passionate, guilty affair with her cousin's husband. In "Harold," a gawky, lonely young man finds acceptance and respect through his poetry. Moving and evocative, these ten stories are written with subtlety, humor, and a keen understanding of the relationships between men and women.

The Critical Heritage gathers together a large body of critical sources on major figures in literature. Each volume presents contemporary responses on a writer's work, enabling student and researcher to read the material themselves.

At thirty-two, Marine Vandale is still waiting for true love. The kind of love that takes your breath away, knocks you on the ground, and makes you scared and crazy all at once. "You're certainly not going to find it if you spend all your time with three guys," her mother likes to remind her. It's just that Marne, her ex Laurent, Jeff her roommate, and their best friend Julien are inseparable. Together, they're trying to navigate the troubled waters of their thirties, become real adults and tame love. But what used to seem like child's play is becoming less and less of a game, and today's mistakes are not as meaningless as the ones they made in their twenties. But each one in his or her own way continues to hope. And from date to date, from man to man, through a thousand situations she describes as "summer stock theatre," Marine persists in believing that one day she'll prove to her mother that you can't fight love.

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: □ physical principles of various material handling systems; □ considerations in selecting technically efficient and environmentally friendly equipment; □ best practices in upgrading and optimizing existing bulk material handling facilities; □ strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
